

CO-CREATING TWIN TRANSITIONS

Climate Change Adaptation Strategies in Urban Planning and Community Development

Seminar and study visit

05 March 2026, Opificio Golinelli, Bologna

Climate adaptation strategies in urban planning and community development

The event is part of the scientific collaboration between the University of Bologna and the University of Tokyo on the theme of the twin transitions — ecological and digital transitions in urban contexts — coordinated by the Department of Philosophy and the Department of Architecture. The KYOSŌ 共創 project, “Co-Creating Twin Transitions,” aims to develop innovative co-creation methodologies for urban transition through the comparison of European and Japanese case studies, integrating participatory approaches with digital technologies.

The morning program offers a dialogue between Italian and Japanese design research on climate adaptation, hosted in the spaces of the Fondazione Golinelli.

In collaboration with: University of Bologna – Department of Architecture · University of Bologna – Department of Philosophy · TRACE Team · ACPCL · Fondazione Golinelli · Diverserighe Studio

Morning Programme

Arrival and welcome

10:00 – 11:00

Visit to the G-Factor facility

Guided tour by Architect Simone Gheduzzi and Dr. Sofia Guarini

11:00 – 11:45

Lecture — Multitude by diverserighestudio

Architect Simone Gheduzzi, Diverserighe Studio

Presentation with video screening · Introduction by Prof. Danila Longo

11:45 – 12:30

Lecture — Climate Change Adaptation Strategies in Urban Planning and Community Development

Prof. Akito Murayama, The University of Tokyo

Introduction by Prof. Claudio Coletta

12:30 – 13:30

Visit to the exhibition “I preferiti di Marino”
